TO: All SolaHD Distribution Partners

RE: SCP/SCD part number migration and CE Certification Change

Dear Valued Partner,

SolaHD has initiated an immediate (minor) part number change on all models in the SCP /SCD Series. This change differentiates a material certification revision – the new product removes CE ratings (all North American cUL safety ratings remain active).

This change results from the product's inability to meet Emerson's RoHS reporting standards. Beyond label changes, there is no change to the product construction, dimensions, performance and function, or pricing and discounts.

- Due to the RoHS compliance issue, Emerson cannot offer a last buy on the CE rated models.
- After existing inventory of the legacy part numbers depletes, only the new part numbers with North American-only certifications will remain available for order.
- For shipments containing the new part numbers, a note will print on shipping documents that indicates the product should not sell into UK/EU markets and should not install in equipment that may ship there.
- Emerson's Phase Out Process, leading toward obsolescence of the legacy items, will initiate with distribution of this notification.
- Partners may contact Emerson's local and regional staff for assistance in addressing specific challenges related to this change.
- See the attachment for part numbering transition.

Necessity for this change arose quickly – Emerson has made best efforts to organize a rational handling process. We appreciate your prompt attention to making the necessary adjustments.

Sincerely,

A handwritten signature in black ink, appearing to read "Trayton Jay".

Trayton Jay | Product Manager | SolaHD Power Supplies | Appleton Group | Emerson

Harish Shinde

- SCP are AC Input 100-240V (or 100-375 Vdc)
- SCD are DC Input (20-70V)
